

HOMEWORK

1) TASK 1

- Print the Local Time in every possible timezone
 - Using the new API for Date & Time print the current local time in all time zones

2) TASK 2 (OPTIONAL)

- Convert the Passed as argument Time to Local Time
 - Passing as argument Time + Timezone from the command line for example 09:00+0900 which will mean 9:00 with offset +9 hours convert and print it in the local time. (this is the opposite of the first task and is the other way around from time with timezone convert it to the local time)
